Summary

Technical Lead and Engineer with **3 years** of experience building and deploying production-grade AI systems for enterprise and SME clients. Led end-to-end development of ML-powered platforms, cloud infrastructure, and CI/CD pipelines across Azure and GCP in a startup environment. Strong background in MLOps, full-stack systems, and translating broad business needs into shipped products.

Experience

Technical Lead

[AI Brain Lab Co. Ltd](#) | **May. 2024 - May 2026 - Bangkok, Thailand**

- Worked in an agile, fast-paced startup developing novel AI-powered applications for clients in Thailand and surrounding regions. Responsible for building scalable backends (Django, FastAPI), complete with databases (Mongo, Postgres), data-warehousing, LLM flow development, deployment as well as production-ready integration, deployment and CI/CD procedures of applications using Unix, GitHub, Microsoft Azure, and GCP.
- Led projects including an AI-first HR screening system, Key Account Management System, and an automated ESG reporting enterprise software for SMEs. This includes translating shifting client/investor requirements into manageable tasks, running Scrum meetings, setting deadlines and delegating tasks to colleagues and interns, as well as pitching and demoing our work to stakeholders.
- Sole Cloud Administrator for Azure and GCP, designing secure IAM, managing budgets, and maintaining dozens of production services while supporting rapid iteration and client deployments.

AI Engineer Founding Intern

[AI Brain Lab Co. Ltd](#) | **Oct. 2023 - May 2024 - Bangkok, Thailand**

- Contribute and ideate to the early-stage development of several founding products including ESG Studio and an Insurance CRM for automotive insurance companies in Thailand.
- Worked with other founders to pitch the startup and secure pre-seed investment for founding the company.

Master's Research - MEng Data Science and Artificial Intelligence

Asian Institute of Technology | **2023 - 2024 - Bangkok, Thailand**

- Designed and implemented an AI-powered CRM system for the automotive insurance sector, integrating intent detection, conversational AI, and automated quotation generation. Research work available upon request.

Hackathon Participant

BOTNOI OpenAI Hackfest | **Apr. 2023 - July. 2023 - Bangkok, Thailand**

- Worked with OpenAI, LangChain, and Microsoft Azure services to develop an AI-powered English language mastery platform for IELTS exam takers.
- Achieved second place in the education domain.

Education

Asian Institute of Technology, Bangkok, Thailand

MEng Data Science and Artificial Intelligence, 2021-2024

- Cumulative GPA of 3.67

University of Nottingham, Nottingham, United Kingdom

BEng (Hons.) Chemical Engineering, 2018-2021

- 1st Class Achievement and Highest Achiever in the graduating class of 2021 | GPA of 4.0

Certifications

- Achieved a score of 8.0/9.0 in **IELTS**, 116/120 in **ETS TOEFL** English Assessments
- Microsoft-certified Azure Fundamentals (**AZ-900**)
- **Google Data Analytics** Professional Certificate
- Microsoft-certified **Excel Expert**

Skills

AI & ML

- RAG systems, LangChain, LangGraph, vision, speech, and language models (EN + TH)
- MLFlow, LangSmith, Azure ML Workspace

Backend & Platforms

- Python (Django, FastAPI, Flask), Golang, Ruby (Rails), Node, PostgreSQL, MongoDB
- Celery and Azure/GCP native message queues

Mentorship

- Responsible for part-time workers as well as 2-month and 4-month interns

Cloud & MLOps

- Azure, GCP, Terraform, CI/CD, MLflow, Azure ML Workspace, Docker, GitHub Actions

Data Engineering

- PostgreSQL, MongoDB, Data Modeling, Data Warehousing, ETL / ELT, Data Pipelines
- LangSmith, NumPy, Pandas
- PowerBI, Tableau, BigQuery, Apache Spark

Languages

- English (Fluent), Hindi (Fluent), Thai (Conversational)

Selected Projects

AI-First HR Platform - *Screening and applicant tracking system*

Technologies: OCR, Python Django, React, Celery, Redis, Azure, GCP, Cloud Storage, Docker

- Built OCR-based resume and ETL pipelines that transformed candidate documents into retrievable profiles.
- Designed storage and retrieval systems for resumes, interview recordings, and recruitment metadata using SQL and cloud object storage.
- Developed data pipelines supporting candidate search, analytics, and machine learning models for candidate evaluation, voice analysis, and facial emotion recognition.
- Reduced candidate screening time from approximately 40 minutes to 10 minutes per applicant through automated resume processing, interview workflows, and candidate evaluation.
- Enabled higher candidate throughput by automating data extraction and retrieval workflows across the recruitment lifecycle and reducing administrative overhead.

Key Account Management System - *Key Account relationship management platform for insurers and providers*

Technologies: Python Django, PostgreSQL, Redis, Celery, Azure, GCP, Docker, OCR

- Built OCR-driven contract ingestion pipelines that transformed unstructured insurance agreements into searchable and queryable records.
- Developed Redis and Celery-based workflow orchestration for document processing, automated task generation, and downstream business operations.
- Deployed a fine-tuned Typhoon OCR model for Thai-language contract extraction, improving automation of document review workflows.
- Reduced manual effort required for contract analysis and follow-up actions through automated extraction, search, question-answering, and task creation workflows.

ESG Reporting Platform - *Enterprise sustainability reporting platform for SMEs*

Technologies: Python Django, RAG, PGVector, SQL, Azure, GCP, Docker

- Built data ingestion pipelines for collecting ESG metrics from disparate organizational data sources.
- Developed ETL to clean, validate, and transform sustainability data into standardized reporting datasets.
- Implemented document processing and extraction pipelines to convert unstructured sustainability records into structured reporting datasets.
- Reduced reporting preparation time by automating data aggregation, validation, and report-generation workflows.

Project Wisdom - *AI-powered conversational avatar platform for public figures and industry leaders*

Technologies: Python Django, RAG, Pinecone, Redis, Azure, GCP, Docker, TTS, STT

- Designed knowledge ingestion pipelines for processing interview transcripts and source materials into structured retrieval datasets stored in Pinecone vector databases.
- Implemented conversation memory systems using Redis to maintain state across multi-turn interactions.
- Developed and deployed Thai-language text-to-speech model (F5-TTS model) and infrastructure integrated with retrieval pipelines, supporting low-latency conversational experiences at scale.
- Built real-time voice interaction workflows combining knowledge retrieval, conversation management, and avatar-based user interactions.
